20ft Container – Water Intake system

Model: NAC-00940

Area of use

The water intake container solution focuses on treating incoming water to achieve optimal water quality before it enters the system. It consists of 3 sand filters, with a flow rate of 3x42 m3/h. The sand filter is installed with automatic valves, and a control system for automatic cleaning. The sand filters perform together with bag filters and UV.

- Container simple to install
- Transport friendly
- Corrosion resistance

Materials

- PE100 – EN12201
- Stainless steel – EN 1.4401

Accessories

- Circulations pumps
- Valves
- Cabinet to monitoring
- Various sensors
- Bag filters
- UV
