# Automatic Belt Feeder

## Area of use

The Automatic Belt Feeder is a compact automatic belt feeder available in two sizes and designed for research facilities and smaller aquaculture facilities. With adjustable feeding intervals and a start/stop function, it ensures precise and consistent feeding, supporting optimal growth and reducing feed waste. The unit is designed for operation in humid environments and is equipped with an integrated brush to prevent feed pellets from sticking. The result is a reliable, user-friendly and maintenance-friendly solution for modern aquaculture.

### Materials

PE100 (EN12201)
Stainless steel (EN 1.4401)
POM
Silicone
Rubber

### Benefits

Automatic and precise feeding
Adjustable feeding intervals
Easy installation
Corrosion-resistant materials
Suitable for high humidity environments
Available in two sizes
